Logging In

Logging In

Before you can make or receive calls or modify any of your settings, you will need to start up the NexTalk Client application and log in with a username and password. You can choose to have NexTalk remember your password for future logins.

If you are a NexTalk.net user:

To log in, enter the user name and password that you registered with us on our web site (<http://www.nextalk.net>). If you have not set up a NexTalk account then press the "**Create a NexTalk account now**" link at the lower left side of the Login Screen and follow the instructions. Remember that registration is not complete until you receive your confirmation email, and reply back. You can modify your password later, but the selected user name cannot be modified once you register it.

If you are logging into a private NexTalk System:

Logging In

To log in, enter the user name and password that were assigned to you by your NexTalk System Administrator. You can modify your password later, but the assigned user name cannot be modified. Your Administrator will also provide you with the NexTalk Domain Address you should be using. Once you log in to a domain, the domain information will be remembered and in future logins you need only select the domain from the drop down menu. You can view and modify a domain address by selecting it and choosing the 'Domain...' button.
